Welcome to Cloudflare Zero Trust Free

Whether you're building a proof of concept for a small team or an enterprise business, Cloudflare makes it easy to get started with Zero Trust and Security Service Edge (SSE).

5 steps to start your Zero Trust journey

1. Set up a login method

- Use a one-time PIN or connect one or more third-party identity providers (e.g. Okta).
- This is the login method(s) your users will utilize when authenticating to add a new identity to your Zero Trust setup.

[See Documentation](#)[Set Up Login Method](#)

2. Connect an app

- Connect apps and services to Cloudflare with the lightweight app connector (Tunnel).
- This is the outbound-only daemon service that protects your corporate resources.

[See Documentation](#)[Connect an App](#)

3. Set policies

- Secure inbound traffic to your resources (Access) by applying access rules based on user or user group actions and/or attributes.
- Apply policies to inspect outbound traffic to the Internet (Gateway) based on DNS, network, HTTP, and egress traffic.

[See Documentation](#)[Set Access Policies](#)[Set Gateway Policies](#)

4. Define device enrollment permissions

- Determine which users can connect new devices to your Zero Trust instance.
- Policy examples include requiring a company email address or using service tokens rather than credentials to enroll a device.

[See Documentation](#)[Define Permissions](#)

5. Prepare devices

- Download and deploy the device client (WARP) to enable device posture integrations, enforcement of DNS, network, or HTTP policies, and more.

[See Documentation](#)[Prepare Devices](#)

Helpful resources

- Explore [learning paths](#) and [tutorials](#), like getting started with replacing your VPN.
- Read [Cloudflare Docs](#) for technical details.
- [Join the Cloudflare Community](#) to learn from experts and everyday users.

Reminder, you are currently on the Zero Trust Free plan which has limited seats, limited logging, and does not include chat or ticket support.
